

Blueprint — Project Manager (PM) Guide

A practical walkthrough of everything you can do in Blueprint as a **Project Manager**. Blueprint turns flagged vendor emails, permits, and site alerts into Kanban tasks; as a PM, your workspace is the **board** — viewing, organizing, and collaborating on the tasks that are yours.

What's my role? Blueprint has two roles: **Admin** and **PM**. This guide covers the **PM** experience. The board is your home; the admin-only areas (Dashboard, Quote Generator, Prospects, Competitive Landscape, email sync, and user management) are noted at the end so you know what's there and who to ask.

1. Signing in

1. Open Blueprint in your browser. The sign-in screen recaps what Blueprint does — flagged vendor emails become tasks, everything lives on one board, and ÆK finds anything fast.
2. Click **Sign in with Microsoft** and use your **company Microsoft account**.
3. You land on the **Kanban Board**.

If you sign in and see an **"Access Pending"** screen instead of the board, your account hasn't been granted a role yet. Click 🙋 **Request access** (you can add a quick note about who you are) and an admin is notified — once they approve you, just sign in again. No need to email anyone separately.

To sign out, open the sidebar and click **Log out**.

2. What you see: the board

The board has two parts:

- **Sidebar** (left on desktop; the ≡ menu on mobile) — your name and **PM** badge, **Search**, a **Help & Guide** link (opens this guide as a PDF), **Log out**, the **theme** switch, and live **Board Stats** (a count per column plus an overall completion bar).
- **Board columns** — your tasks, grouped into six status columns.

First time in? If your board is completely empty, you'll see a **"No tasks yet"** message — flagged vendor emails will sync in on their own, or you can press ✎ **New Task** to add the first one.

There's a link to this guide right there too.

Heads-up — you see *your* tasks, not the whole company board. Blueprint only loads tasks that are **assigned to you** or that **you created**. This keeps your board focused. (Admins see everyone's tasks.)

The six columns

Tasks flow left to right. Each status has its own color, which also tints the top edge of every card:

Status	Meaning
 To Do	New / not started
 In Progress	Actively being worked
 Review	Waiting on a check or approval
 Done	Complete
 On Hold	Paused / blocked
 Cancelled	No longer needed

My Work vs. All Tasks

Just under the title is a toggle:

-  **My Work** (*default*) — only tasks **assigned to you**. If any are past their due date, a red "**N overdue**" badge appears here.
-  **All Tasks** — everything on your board (tasks assigned to you **plus** ones you created).

Your choice is remembered in your browser for next time. If **My Work** is empty, you'll see a shortcut to jump to **All Tasks**.

3. Working with a task card

Each card shows, top to bottom: the **title**, any **store-number tags**, a **PO chip** (if present), the **source** ( from an email, or  created manually), the  **date it was created** (hover for the exact time), the **assignee(s)**, a short **summary**, and the editable controls below.

Every edit you make **saves automatically** — there's no Save button.

Move a task to another column

- **On a computer:** grab the  handle in the card's top-right corner and **drag** the card into another column. (Only the handle starts a drag, so the rest of the card stays clickable.)
- **On a phone:** use the card's **Status** dropdown to change its column — the board shows one column at a time on small screens, so dragging across columns isn't practical there.

Edit fields inline

- **Status** — the left dropdown; same as moving the card.
- **Assignee** — reassign to **Unassigned** or a **supervisor** (Ben, Kris, Vlad, Bogdan, Frank Crew). *Note: assigning a task away from yourself may remove it from your **My Work** view. Putting a real person on a "To Do" task automatically moves it to "In Progress"* — assigning someone means work has started. (Tasks already past To Do, or set back to Unassigned, are left alone.)
- **More than one person?** Use the dashed  chip next to the assignee to put **additional people** on the same task — each shows as a  **chip** (remove with its **X**). Everyone on the task sees it in their **My Work**. The dropdown assignee stays the primary; promoting a  person to primary clears their chip.
- **Due date** — pick a date. An overdue, still-open task shows the date in a muted rose with an "Overdue" tooltip (and feeds the **My Work** overdue badge).
- **Quote** — if a task has a quote, click the  chip to open it and set the amount, the **pipeline stage** (Draft → Sent → Won → Lost), the quote **type**, and the responsible **person**.
- **Notes** — open the  chip in the card's tool bar (below) and type; notes save when you click away. A small dot on the chip means the note has content.

Store tags and the card tool bar

- **Store tags** — blue **#123** chips. Click one to **filter the whole board** to just that store; a bar appears up top with a **X Clear filter**. Click the tag again (or Clear) to remove the filter.
- **Tool chips** — along the bottom of each card is a single row of small, icon-only chips. Tap one to open its panel just below the card (one at a time):
 -  — read the original **full email** safely (only on email-sourced tasks).
 -  — the **note** box (above).
 -  — **attachments** (the number shows the file count).
 -  — **comments** (the number shows the comment count).

-  **Attachments** — open the chip to **download** any file () , **+** **Add file** to upload your own (you can pick several at once), or remove one with **X**. Files that arrived **with an email** are kept for **30 days**, then the download is removed and the entry shows **"expired"** (the record stays on the card); files **you upload** are kept indefinitely.

The summary reads the attachments for you. On email-sourced tasks, when an attachment matters to the work — a bill, a schedule, even a scanned image — the AI reads it and appends the key details to the card's **summary**, marked with  . So if a card's summary mentions figures that aren't in the email body, they came from an attachment. (Files you upload yourself aren't auto-analyzed.)

Delete a task

Click the small **X** in the card's bottom-right corner. (Use this for cards you own — deleting is permanent.) **Deleted means deleted:** a card that came from a flagged email will **not** come back on the next sync, even if the email is still flagged in Outlook — same for any later replies on that email's thread.

4. Creating a task

1. Click  **New Task** (top-right of the board).
2. Fill in:
 - **Title** (*required*) — what needs to get done.
 - **Assign to** — Unassigned or a supervisor.
 - **Also assign** — optionally add **more people** to the same task with the **Add person...** picker (remove one with its chip's **X**).
 - **Status** — which column it starts in (defaults to **To Do**).
 - **Due Date** — optional.
 - **Quote** — optional amount, e.g. **\$12,000** .
 - **Notes** — any extra context.
3. Click **Create Task**.

The task appears on your board immediately. Because you created it, it stays visible to you on **All Tasks** even if it's assigned to someone else. **Heads-up:** if you create it as **To Do** with a person assigned, it opens straight in **In Progress** (assigning someone means work has started).

5. Comments, @mentions, and reactions

Open a card's  chip (in the tool bar along the bottom of the card) to discuss a task in context.

- **Comment** — type in the box and click **Post** (or press ⌘/Ctrl + Enter).
- **@mention** — type  and start a name; pick from the autocomplete (**Enter** or **Tab** accepts the top match). Mentioned names are highlighted in the posted comment.
- **Reply** — click **Reply** under a comment to thread a response beneath it.
- **React** — click  and choose an emoji; click a reaction chip to toggle your own reaction on or off.
- **Edit / delete** — use  /  on your **own** comments. (Admins can edit or delete any comment.)

Comments appear for everyone on the task in near real time.

6. Search (⌘K)

Press ⌘K (Mac) or Ctrl+K (Windows) anywhere — or click **Search** in the sidebar — to open the command palette.

- Type at least **2 characters**. Search matches task titles, store numbers, POs, vendors, and assignees.
- Navigate with ↑ / ↓, open with ↵ **Enter**, dismiss with **Esc**.
- Selecting a task **jumps to it on the board** and briefly **flashes** the card so it's easy to spot. (Searching automatically switches you to **All Tasks** and clears any store filter so the card is guaranteed to be visible.)

As a PM, search covers **your tasks**. (Quotes and Prospects are admin-only data and won't appear in your results.)

7. Light, dark, or system theme

In the sidebar, click the **theme** button to cycle  **Light** →  **Dark** →  **System**. **System** follows your device's appearance setting. Your choice is remembered, and the app loads in the right theme with no flash.

8. On your phone

Blueprint is built to work on a phone:

- Tap **≡** (top-left) to open the sidebar (search, log out, theme, stats).
 - Use the **column pills** to switch between statuses — the board shows one column at a time on small screens.
 - Move cards between columns with the card's **Status** dropdown (not drag).
 - The **New Task** form and **menu** open as bottom sheets sized for thumbs.
-

9. Saving, real-time updates, and going offline

- **Auto-save** — every change writes to the server automatically.
 - **Live board** — the board refreshes itself about every **2 seconds**, so edits from teammates show up without a manual reload.
 - **Offline** — if you lose connection, a 📶 **offline** banner appears and a notice warns that changes won't save until you reconnect. When you're back online, the board re-syncs to the latest server state. If a save fails, you'll see a brief warning so nothing is silently lost.
-

10. What's admin-only (and not on your board)

These exist in Blueprint but require the **Admin** role. If you need something here, ask an admin:

- **Dashboard** — analytics across all tasks.
- **Quote Generator** — building and exporting PDF quotes.
- **Prospects & Competitive Landscape** — the warehouse lead pipeline and market map.
- **Accounting** — Blueprint Books (invoices, bills, statements, reconciliation, purchase orders, budgets, fixed assets, and more).
- **Refresh / Sync Emails** — pulling flagged emails into tasks. *(This runs automatically in the background regardless — flagged emails become tasks on their own.)*
- **User Access** — adding people, setting roles, approving **access requests**, and **CSV-importing** tasks in bulk.
- **View User Activity** ("view as" another user) and **Clear All Tasks**.

Trying to open an admin page simply returns you to the board.

Quick reference

Keyboard shortcuts

Action	Shortcut
Open / close search	⌘K / Ctrl+K
Search: move selection	↑ / ↓
Search: open result	Enter
Search / dialogs: close	Esc
Post a comment	⌘/Ctrl + Enter
Accept @mention	Enter or Tab

At a glance

- You see **only your tasks** (assigned to you or created by you).
- **Drag** to move cards on desktop; use the **Status dropdown** on mobile.
- Everything **auto-saves**; the board **auto-refreshes** every ~2s.
- **My Work** = assigned to you; **All Tasks** = yours + ones you created.

Getting help

The **Help & Guide** link in the sidebar reopens this guide any time. If something looks wrong — a missing task, a card that won't save, an access screen you didn't expect — note what you were doing and reach out to your Blueprint admin. If an error screen shows a reference **ID**, include it; it helps them trace exactly what happened.
